

CivicChain

Multi-Agent Public Service Collaboration Hub

The Urban Challenge

Current Pain Points

- Manual complaint triage takes 2-3 days on average
- Departments operate in silos with no real-time coordination
- Budget approvals delay repairs by weeks
- Citizens face long wait times for critical issues

The CivicChain Solution

Autonomous Real-Time Command Center

- Replaces manual processes with a multi-agent AI network
- Processes, routes, and budgets reports in seconds
- Operates 24/7 with zero human intervention
- Integrates seamlessly with existing city infrastructure

How CivicChain Works

Diagram of a multi-agent AI workflow with three nodes labeled Llama 3, Mistral, and Qwen

The Agent Workflow

- Llama 3 classifies reports by category and hazard level
- Analyzes text, images, and location data in real time

- Mistral routes tasks to the correct department
- Generates unique tickets with priority levels
- Qwen estimates repair costs with 95% accuracy

*CivicChain reduces response times from days to seconds,
saving cities millions annually*
